

GORKEM KOROGLU

SENIOR BUSINESS ANALYST | TECHNICAL BUSINESS ANALYST

Email: gorkem.koroglu@hotmail.com | Mobile: +90 553 386 00 59 | Location: Istanbul, Turkey

PROFESSIONAL SUMMARY

Technical Business Analyst with 3+ years of experience turning business requirements into structured, testable solutions across banking, insurance, core banking and payment systems.

EXPERIENCE

Senior Business Analyst – Yapı Kredi Teknoloji via NTT Data Business Solutions (Sep 2024 - Present)

- Conduct end-to-end business and technical analysis for core banking and payment systems projects, covering requirement analysis, scope clarification, functional design, testing and UAT coordination.
- Transform business requirements into clear functional specifications, system flows, acceptance criteria and testable deliverables for implementation and validation processes.
- Analyse banking workflows, money transfer processes, system integrations and database-level controls to ensure expected system behaviour is clearly defined and aligned with business needs.
- Perform functional, service, database and UAT testing by preparing test scenarios, validating system outputs, analysing defects and following issues through resolution.
- Act as a bridge between business units, developers and project stakeholders, ensuring requirements are clearly understood, documented and delivered in line with business expectations.
- Use Jira and Confluence to document analysis outputs, track requirements, manage issue follow-ups and support Agile delivery across banking technology projects.

Technical Business Analyst – HDI Fibaemeklilik (Sep 2022 - Sep 2024)

- Worked on insurance business applications by analysing operational needs, functional processes, system behaviour and post-release issues.
- Prepared functional specifications, business rules and system requirement documents to support software enhancements and process improvements.
- Reviewed user needs, data structures and application workflows to identify gaps between expected behaviour and actual system outputs.
- Used SQL/PLSQL, Jira and data modelling practices to validate business logic, investigate defects and support root-cause analysis with technical teams.
- Executed functional, database and UAT scenarios by validating outputs, reporting defects and coordinating issue resolution until closure.
- Coordinated with business units, developers, vendors and project stakeholders to clarify requirements, follow up open items and support successful delivery.

SKILLS

- **Business Analysis** (Requirement Analysis, Functional Specifications, Business Rules, SDLC)
- **Technical Analysis** (System Analysis, API/Service Testing, Database Validation, SQL, PL/SQL)
